Application — Lead AI Deployment Strategist (m/f/d)

Dear SIXT Hiring Team,

Scaling AI from proof of concept to real business impact is what I do today. At thyssenkrupp nucera I hold the company-wide mandate to identify and implement AI use cases: ~30 identified in workshops with the business functions, two in production, more in delivery. The production agents are not demos — the entire service team works with an agent that reads, classifies, tickets and drafts a reply to every incoming request.

Deployment, in my experience, fails on organizational blockers more often than on technology. To build our LCOH platform — the metric that decides whether an electrolyzer plant gets built — I took the company's first AI development environment through IT objections, committees and board meetings to an approved pilot, and won the business side as allies with a simple economic argument: the external alternative would have cost several hundred thousand euros and delivered less. Removing blockers, aligning executives, quantifying value — that is the job you describe, and it is the part of my work I am best at.

I think in business cases by habit. As Executive Assistant to the CEO I ran cost and business-case analyses and M&A assessments; as Strategic Program Manager I steered four strategic workstreams and replaced the group's manual workstream reporting with an integrated Power Platform tool — cutting repetitive effort by ~80% (from >32h to ~6h per cycle). It remains in unchanged daily use after my internal move, which I consider the real test of adoption.

Why SIXT: because you are serious about agentic AI at enterprise scale, and ONE — with 350,000 vehicles and millions of drivers — is an operations landscape where deployed agents translate directly into measurable value. I also work best at real pace: my principles are structured data before intelligence; automate the process, not just the output; build fast, iterate, deliver; keep the human in the loop by design. They are tested in production, not in slides.

My notice period is three months. I would be glad to walk you through the artifacts behind every claim in this letter — the agents, the platform, the numbers.

Kind regards

Moritz Schumacher
